

### **Listing of Claims**

The following list of claims will replace all prior versions and listings of the claims in the application:

Claims 1-9 (canceled).

Claim 10 (previously presented): A process for the production of a particulate detergent or detergent premix component comprising the steps of coating a particle comprising one or more alkali metal percarbonates with a flowable acidic component consisting of stearic acid, to form particles wherein the amount of acidic component applied to the particle is governed by the formula  $m_c/(m_c + m_p) = c \cdot 1/r$ , where  $m_c$  is the weight of the acidic component applied,  $m_p$  is the weight of the particle,  $r$  is the radius of the particle in  $\mu\text{m}$ , and  $c$  is a factor of 0.5 length units to 20 length units, and wherein the particulate detergent or detergent premix component has a stepped pH profile when contacted with water.

Claim 11 (original): The process of claim 10, wherein the particle has a radius  $r$  of 100  $\mu\text{m}$  to 1,000  $\mu\text{m}$ .

Claim 12 (original): The process of claim 10, wherein  $c$  is a factor of 5 length units to 10 length units.

Claim 13 (canceled).

Claim 14 (original): The process of claim 10, wherein the flowable acidic component is solid at room temperature and is applied to the particle in a flowable form at a process temperature above room temperature.

Application No. 09/718,943  
Response dated February 10, 2006  
Reply to Office Action of November 28, 2005

Claim 15 (original): The process of claim 10, wherein the acidic component is applied to the particle over a period of 5 minutes to 20 minutes.

Claims 16-19 (canceled).
